In the article “Pragmatism in manual therapy trials for knee osteoarthritis: a systematic review” it was reported post-publication that two of the studies included were secondary analyses of other studies that the authors had already included. Additionally, the authors modified the reasons for excluding two other studies. The overall conclusions of the systematic review do not change.

We apologize to the readers. The final version of this article, which has been edited to reflect these changes is available online and includes a reference to this correction.
