

Supplementary Figure

Supplementary Figure 1. (A) Distribution of lcSSc disease duration in years for AC-3 and Non-AC-3 groups (p=0.197). § indicate one outlier with disease duration of 36 years. (B) Distribution of AC-3 titers for 38 positive samples, with mean of 1/987 (±1/809). (C-F) Distribution of reactivity to CENP-B by ELISA according to reactivity by Line-Blot to CENP-B (C) and CENP-A (D). Distribution of AC-3 pattern titer according to reactivity by Line-Blot to CENP-B (E) and CENP-A (F). Blue Error bars indicate mean ±SD in all graphs.
